Experience

Co-founder & Design Engineer

Mare 

Remote

January 2026 – Present

- Co-founded a reference tool for designers and artists and built it end to end — ingestion pipeline, embedding + clustering layer, and the Next.js/TypeScript interface; closed beta with 100+ creatives and 10,000+ reference items processed.
- Built the Python/FastAPI backend on Supabase (Postgres + pgvector) with a self-hosted embedding/LLM service on serverless GPU (Modal); deployed on GCP (Cloud Run, Cloud Tasks) with Stripe billing.

XR Software Engineer

Sara Niroobakhsh & Wafaa Bilal (“Date 0:0” installation)

Remote

August – December 2025

- Developed a Unity and Meta XR SDK based MR/VR app, optimizing 3D scanned and artist-generated assets to reduce scene memory usage by 60% and achieve a stable 90 FPS on standalone Quest 3.
- Implemented real-time NoSQL synchronization across concurrent gallery-installation devices with persistent environment states.

Fullstack Software Engineer

Callback

Tokyo, Japan/Remote

May 2024 – December 2024

- Launched a Next.js, TypeScript, Express.js, and Firebase site with a user leaderboard, boosting weekly active users from 25 to 250 within three months on GCP Cloud Run.
- Built a scalable social REST API (user profiles and a friend graph) that doubled daily active users in a month.
- Developed an enterprise dashboard with Stripe payouts and automated weekly Twilio reports and data visualizations, growing active partners on the dashboard by 200%.

XR Software Research Intern

NYU Tandon @ The Yard

New York City, USA

June 2024 – August 2024

- Independently delivered optimized Unreal Engine environments, Niagara simulations, and motion/volumetric capture pipelines; showcased to 300+ participants at NYU’s engineering research conference and ArtsIT: Game Creation Conference.

XR Software Engineer Intern

NEEEU Spaces GmbH

Berlin, Germany

May 2023 – July 2023

- Developed an AR ad campaign for BMW’s lifestyle magazine, achieving a 20% increase in customer engagement.

Education

New York University

B.A. Interactive Media, minors in Computer Science, Sound Computing, Art History

September 2021 – May 2025

GPA: 3.92/4.0

- Coursework: Algorithms, Data Structures, Natural Language Processing, Shader Programming, VR/AR Development, Web App Development, Game Development.

Selected Projects & Presentations

LAND: Unreal Engine Film

November 2024 – April 2025

- Experimental Unreal Engine film integrating fluid simulation, motion capture, photogrammetry, and custom-trained AI visuals; screened at Ars Electronica Festival, Linz (122,000+ festival attendees).

“I only experience things in latent space now” — Video-Diffusion Film

May 2026

- Built a video pipeline conditioning diffusion models on depth, optical flow, and attention to rework archival and found footage; screened at Shortwave x Soft Centre, Sydney Opera House (Vivid Live).

Instructor – Architectural Association Visiting School, Warsaw

July 2025

- Invited to teach game design and scripting at an international workshop in Warsaw for architecture and PhD students.

Exhibitions & performances: Ars Electronica (Linz) • Dark Mofo (Hobart) • Sydney Opera House (Sydney) • MUTEK.AE (Dubai) • Jameel Arts Centre (Dubai) • Alserkal Avenue (Dubai) • Fuji Rock (Japan). Full list at aakarsh.dev/cv .

Technologies

Languages: TypeScript, JavaScript, Python, C#, C++, SQL, GLSL/HLSL

Web/Backend: Next.js, React, Tailwind CSS, Framer Motion, Three.js/WebGL, FastAPI, Node.js, Supabase, PostgreSQL + pgvector, GCP (Cloud Run, Cloud Tasks), Cloudflare R2, Stripe, Docker, Git, Figma

Real-time/XR: Unreal Engine, Unity, TouchDesigner, Blender, Cinema4D, Ableton
